Education

East Asia University of Technology
B.Sc. in Information Technology
2022 - 2026

Skills

Technical Skills

- SQL: PostgreSQL, BigQuery
- Power BI: DAX, Power Query
- Python: pandas, NumPy
- Machine Learning
- Excel

Tools

- Git & GitHub
- VS Code, Jupyter
- Claude Code (AI)
- Power BI Desktop

Languages

- English (technical reading)

Soft Skills

- Self-learning
- Teamwork
- Problem solving

Hoang Van Hieu

Data Analyst Intern

Information Technology student focused on data analytics, with hands-on experience across the full workflow: cleaning and modeling data with SQL and Python, building Power BI dashboards around business questions, and defining the KPIs that drive decisions. Looking for a Data Analyst Intern / Fresher role to turn data into clear, actionable recommendations.

Personal Projects

VietDist Analytics - FMCG Sales Data Pipeline

Python | PostgreSQL | SQL | Power BI (DAX)

- Built an end-to-end pipeline loading 10 scattered Excel/CSV files from Google Drive into PostgreSQL with a Medallion architecture (Bronze, Silver, Gold).
- Modeled versioned sales targets and tracked staff and distributor changes with SCD Type 2, so revenue stays tied to the region at the time of sale.
- Wrote data-quality tests and reconciled totals from source files to Power BI with a 100% match.
- Delivered a 7-page Power BI dashboard (103 DAX measures, 5 row-level security roles) for the sales and distribution teams.

Superstore Market Expansion

Python | Power BI | DAX | Star schema

- Cleaned and modeled 51K order lines across 147 countries, fixing 10 data issues and reconciling totals after each step.
- Found the EU drove the most growth at a 12.4% margin while fast-growing EMEA earned only 7.5%; built a 4-page dashboard to guide expansion.

MoMo Topup Performance 2020

Power BI | DAX | Power Query

- Assessed whether raising top-up cashback from 1% to 2-3% stays profitable, using 13.5K transactions across 5 carriers, with a dashboard built on two North Star metrics.

Facebook Ads Dashboard with Claude AI

Claude Code | Python | HTML

- Turned a flower shop's daily ad exports (17 campaigns, 58.4M VND spend) into a live dashboard showing where to add or cut budget each day.

E-commerce Churn Prediction

Python | scikit-learn

- Tuned a Random Forest to 0.925 balanced accuracy on 5,630 customers and segmented churned users into 4 groups with KMeans.
